CALIF. LOMA RICA NURSERY. GRASS VALLEY, RETURN TO POMOLOGY

SECT's the California Orchardist

oma Rica Nursery solicits YOUR order, believing that you appreciate Nursery Stock of the Highest Possible Quality. We grow such stock, and no other kind.

Your order will be filled with thrifty, vigorous stock, doubly guaranteed true to name, free from all insect pests and plant diseases

It will reach you in perfect condition, and if you do your part thereafter we unconditionally guarantee the trees to make good in every way, unless later affected by insect attacks, weather conditions, plant diseases, unfavorable soil conditions or other cause over which we could

We sell you the best trees that money can buy, and if you have the slightest cause for complaint we will adjust it to your satisfaction, provided you notify us within five days after receiving the shipment and enclose a statement from your horticultural commissioner stating the ground for your complaint. If we have no notice to the contrary within the time stated, we shall consider that the order has been filled to your entire satisfaction. make this rule, not to evade responsibility, but in order to have any complaints reach us promptly, when all the facts can be inquired into in a manner and at a time that will insure an adjustment that is absolutely fair to both parties.

In every planting season thousands of trees fail to grow. Many inexperienced orchardists—and a few who know better—are apt to excuse their own shortcomings or the carelessness of their hired help by placing the blame at the door of the nurseryman. Where the true facts are arrived at the nurseryman is seldom at fault.

The orchardists of the world saw our magnificent display of 48 varieties of pears in the Nevada County exhibit in the Palace of Horticulture at the Panama-Pacific Exposition. This display, which was awarded the Medal of Honor against the competition of the world—the highest award in its class—in one brief season made Loma Rica Nursery known to the orchardists of America as specialists in pears, while our dissemination of information repecting the super-advantages of growing this fruit on the blight-andaphis-resistant root—which we were first to exclusively adopt—has particularly served to commend our stock to the commercial pear planters. We trust that it may be our privilege to serve them acceptably, and to work with them toward the solution of all problems that confront the industry.

-grown in the mellow, red loam soil of the higher foothillsdevelop such a strong and abundant root system that many veteran orchardists declare them to be the best they have ever seen, while our packing system furnishes perfect protection to root and top alike.

Unlike many nurseries, we make no charge for packing material—our prices do not carry any "extras" when the oill comes in. Our trees are sold like groceries-no extra charge for the package.

WHY YOUNG TREES FAIL.

newly-planted trees fail to grow are great safeguard. as follows:

lessness, or the carelessness of the planting. recipient at some point between the receiving station and the orchard. Trees should be inspected without allowing the small roots to dry out; should be promptly taken from the station and "heeled in" in moist soil to prune heavily immediately after planting.

3. Improper planting, particularly the failure to tramp good, moist soil FIRMLY about the roots, and failure to prune heavily immediately after planting. in such manner that all roots are kept moist and protected from frost until tions, such as drying winds or failure ready for planting, and should then be planted in moist soil without the 5. Neglect after planting. The first

OUNG TREES FAIL. slightest exposure of the roots to wind or sun. Dipping the roots in principal reasons why thin mud when ready to plant is a

- 2. Soil poorly prepared, especial-1. Roots drying out, as a result of ly where land has been newly cleared some horticultural inspector's care- or lacking in moisture at time of

 - 4. Unfavorable seasonal

season is a critical time with the young tree, since it must grow a new root system to take the place of the roots lost on removal from the nursery. During this time, soil moisture must be thoroughly maintained at all times and the soil kept loose and free from any growth for several feet around the tree.

OUR PRICES.

Our prices are most reasonable when you consider QUALITY and the guarantee behind our stock, but we make no effort to match prices with the numerous tree peddlers and Cheap-John nurserymen, who are the curse of California horticulture, nor do we expect the patronage of those who fail to understand that High-Class Stock CANNOT be sold for the price of the common stock which starts many an orchardist on the road to failure from the day he buys his trees. Remember, poor trees always make poor orchards, and good trees do, also, UNLESS RIGHT-LY CARED FOR.

GUARANTEE OF GENUINENESS.

We guarantee every tree sold by us to be true to name, and agree—upon proper proof—should any prove untrue, to replace such tree with another of equal grade of the variety purchased, or to replace the same with other nursery stock of equal value at the customer's option, paying all transportation charges thereon, and also to refund to the purchaser the full amount originally paid us for such stock. We disclaim any greater liability and all our sales are made with this understanding.

NOMENCLATURE.

In the descriptions, where several names are given, that which the American Pomological Society accepts as correct is given first. It is desirable that nurserymen and orchardists should unite in an effort to standardize the names of all fruits, accepting as authoritative the decisions of the American Pomological Society. The practice of selling nursery stockunder different names in different localities is a survival of the ignorance of earlier times, and should be abandoned.

Under each heading varieties are arranged in the order of ripening. A star (*) indicates that the variety is of high quality or is commercially valuable.

APPLES.

The universal fruit. No family orchard complete without a few of the best, from early to late. Commercially, the planting of apples should be regulated by the market demand in the locality under consideration.

*LIVLAND. Probably the most valuable early apple. Russian; medium to large; beautiful waxen-white, striped, shaded and marbled with light crimson; flesh white, sometimes stained with red; fine, tender, pleasant, mild subacid; cooking and dessert; very good; hardy; blooms late; bears young and bears well; resistant to blight; superior to Yellow Transparent and Red Astrachan.

RED ASTRACHAN. Well-known early apple. Russian; medium to large; attractive, greenish yellow, largely covered with light and dark crimson, overspread with bluish bloom; flesh white, often tinged with red, rather fine, tender, juicy, brisk subacid; cooking and dessert; good; hardy; bears young.

*WILSON RED. Desirable summer apple. American; medium to large; unusually beautiful; dark red (solid color) where exposed to sun; flesh very firm, moderately fine, juicy mildly acid; cooking and dessert; good shipping apple; has sold on Kansas City markets for \$16 per barrel; hardy; bears young.

*GRAVENSTEIN. One of the best summer apples. German or Danish; large; attractive, greenish yellow, overlaid with broken stripes olight and dark red; flesh yellowish, firm, moderately fine, crisp, fairly tender, juicy, sprightly subacid; cooking and dessert; very good to best; bears moderately young; fairly productive; fruit drops badly in some seasons; excellent shipper.

*KING 'DAVID. One of the best fall apples. American; medium to large; no apple more beautiful; solid, deep red, almost black; flesh yellowish, firm, crisp, rich, juicy, mild, subacid; cooking and dessert; very good; popular market variety in southern California; bears young, heavily and regularly; fruit rarely blown off by wind.

*JONATHAN. A standard of quality and beauty among fall apples. American; medium to large; color like King David but hardly so dark; flesh yellowish-white, sometimes red tinged; firm, crisp, tender, juicy, very aromatic, sprightly subacid;

LOMA RICA NURSERY, GRASS VALLEY, CALIF.

- cooking and dessert; very good to best quality; tree bears young and regularly; fruit sometimes drops considerably and may "spot" if held long in storage.
- GRIMES (Grimes Golden). Unexcelled in quality by any other fall apple. American; medium size; rich, golden yellow, with russet dots; flesh yellow, very firm, tender, crisp, moderately coarse, juicy, subacid, rich, aromatic; cooking and dessert; very good to best in quality; blooms late, bears well; bears young; does not "hold". well in storage.
- *DELICIOUS. A fall or early winter variety of striking appearance and fine flavor. American; large to very large; greenish yellow, striped and overlaid with bright and dark red, almost black at times; flesh firm, fine, tender, juicy, sweet, mild, subacid, crisp, flavor like a blend of pineapple, banana and apple, unlike any other; dessert only; very good to best in flavor; strong grower; hardy, late bloomer; does fairly well in hot climate; fruit kept in an open shed at Grass Valley had not started to decay May 10th, but its fine quality deteriorates rapidly unless placed in cold storage immediately after harvesting.
- YELLOW BELLEFLOWER. Well-known early winter apple. American; large to very large; pronunced yellow color often blushed on one side; flesh pale, whitish-yellow, firm, crisp, rather tender, juicy, aromatic; cooking and dessert; very good; successful commercially in but few localities and less popular than formerly.
- *BANANA (Winter). Late fall apple of great beauty and fine flavor. American; large; clear, pale yellow, with beautiful pinkish-red cheek; flesh whitish-yellow, tender, juicy, somewhat crisp, mild subacid, distinctly aromatic; dessert only; very good; fruit a little tender for long shipment, fine for nearby markets; bears young and regularly.
- *RHODE ISLAND GREENING. Best late fall cooking apple. American; large; green to greenish yellow, rarely blushed; flesh yellowish, firm, moderately fine-grained, crisp, tender, juicy, rich, sprightly subacid; quite good as a dessert apple; somewhat slow starting to bear but is a fairly reliable cropper.
- *ESOPUS (Spitzenberg). Winter apple of highest quality. American; medium to large; deep yellow, almost covered with bright to dark red when well colored, marked

- with yellow and russet dots; flesh tinged with yellow, firm, moderately fine, crisp, fairly tender, juicy, aromatic, sprightly subacid; cooking and dessert; very good to best; tree slender, weak grower, subject to fungus attacks and blight; variable in bearing habit; succeeds in relatively few localities.
- *WHITE PEARMAIN (White Winter Pearmain). Desirable winter apple. American; medium size; pale yellow, sometimes blushed with brownish red; flesh slightly tinged with yellow; firm, finegrained, crisp, tender, juicy, mild subacid, sprightly, pleasantly aromatic; a dessert apple of best quality; usually bears well.
- *ROME (Rome Beauty). Good cooking apple and good keeper. American; medium to large; yellowish green, mottled, striped or overlaid with red, occasionally spotted with patches nearly black in color; flesh whitish with slight tinge of yellow or green, firm, a little coarse, rather crisp, juicy, mild subacid; rather low quality as a dessert apple in fair demand for late markets; bears young and regularly; one of the last to blossom.
- *STAYMAN WINESAP. Valuable late winter apple. American; medium to large; yellowish, often nearly covered with dull red and indistinctly striped with dull carmin. russet dots often conspicuous; flesh tinged yellowish or greenish, fir. rather fine-grained, moderately crisp, juicy, aromatic, sprightly pleasantly subacid; very good indessert or cooking; tree bears young; regular cropper; succeeds everywhere, even in warm locations.
- *YELLOW NEWTOWN (Albemarle Pippin). Standard late yellow market variety of best quality. American; medium to large; bright yellow, often with distinct pink blush; flesh yellow, firm, crisp, tender, rather fine-grained, juicy. sprightly, subacid, highly aromatic, unexcelled for cooking and dessert; fairly dependable cropper but slow starting to bear; succeeds in certain localities only; fine cider apple.
- *WINESAP. One of the oldest handsomest and best. American; medium to small unless heavily thinned; bright, deep red indistinctly
 striped and blotched with dark purplish red, over yellow ground
 color; flesh tinged with yellow
 veins, sometimes red; very firm,
 rather coarse, crisp, very juicy,
 sprightly subacid; excellent for

GRASS VALLEY. LOMA RICA NURSERY. CALIF.

cooking or dessert and one of the best keepers; tree vigorous, young and regular bearer, always requiring thinning; adapted to warm climate.

APRICOTS.

On apricot and peach roots:

Lincoln 35c straight, one size only.

LIARITIES.

Probably no variety is less exacting in its requirements as to soil and cultural conditions than Bartlett, and in the nursery it outgrows nearly all others. Because of its exuberant vigor and consequent rank growth where plant food and moisture are abundant, it is among the most susceptible to blight. Under ideal conditions it does not appear to demand cross pollination to insure fruitfulness, but ideal conditions are so rarely realized that cross pollination i always best. In a four-year pollin- couth habit of growth. In the nuration experiment we have increased sery, it is too slender and limber to the Bartlett crop in a test block ε sustain its own weight. For this the Bartlett crop in a test block ε sustain its own weight. For this much as 700%—all other conditions reason we train to stakes, but even remaining as before the beginning of then seldom get perfectly the test. Our recommendation for stems. But for the high of

Anjou is one of the most desirable Best and profitable of shipping pears, but early canning peach; large; high it grows more slowly than Bartlett and in poor soils requires more moisture and fertilizer until well established. Eventually it makes a better-shaped tree than Bartlett and is long-lived and productive. An Anjou tree in this (Nevada) county is credited with fifty successive crops. makes its growth in the early part of the season and becomes dormant quite early in the fall. If fertilized, the application should be made early in the spring. In the nursery Anjou grows tall and slender. The ideal in the spring. The ideal tree to prune to shape in the orchard. Sold at 6.75 per box this season One of the best cold-storage varieties and in strong demand by the fancy trade.

Seckel is an upright, sturdy tree, but makes exceptionally slow growth. Blight-resistance seems generally to go hand-in-hand with slow growth. This variety is a good pollinator for Bartlett. In the nursery it makes a "stocky" tree but is apt to fall short in height.

Another variety with similar habits of growth, although not so dwarfish, is Comice. Its tendency is to form an upright, narrow-headed tree, and the pruner must fight this peculiarity from the start. Heading very low is recommended. Comes to bearing rather slowly. For this reason, summer pruning, instead of winter, is recommended, thus causing fruit spurs to form at an earlier age. Crosspollination is absolutely essential. VARIETAL TRAITS AND PECU- otherwise a very light cropper. Fruit always sold in half boxes, and at a higher average price than any other except Forelle-1916 sales reaching \$3.60 per half box.

Bosc makes a vigorous growth in the nursery but has a strong tendency to grow a crooked stem. makes a round-headed tree and usually occupies more space than Bart-Very fruitful when pollinated, !ett. Comice being among the best for this purpose. Sales were made during the season of 1916 at \$5.00 per box. during

Winter Nelis is the despair of the pruner because of its sprawling, unthe test. Our recommendation for stems. But for the high quality of rellinators is two rows of Comice, the fruit, the faults of the tree would Anjou or Winter Nelis to six rows of have cast it into the discard long

LOMA RICA NURSERY, GRASS VALLEY, CALIF.

ago. Probably needs pollination more than any other commercial variety, Comice or Bartlett serving well in this capacity.

Forelle makes a vigorous, upright growth in orchard or nursery, and in both bark and leaf has some re-The recordsemblance to the apple. breaking price of \$8.95 per half-box on the New York auction this fall has created a heavy demand for the tree. orchardists For this reason, some Forelle may be tempted to buy on French roots, since the supply blight-resistant roots is very small. However, as Forelle is apt to go down badly with blight wherever Bartlett is affected, this variety should never be planted except on resistant roots. Summer pruning and cross-pollination are beneficial in bringing Forelle to heavy bearing, Howell being a de-With both Forsirable pollinator. elle and Howell, as with Bartlett, vigilant care must be constantly exercised to control blight.

PEARS—Condensed Descriptions.

- MADELINE. Small; pale yellow; Resists blight. tender, sweet, juicy; good quality; pANA'S HOVEY earliest market pear. Medium small, ye
- *WILDER. Small to medium; yellow with red cheek; sweet; desirable for early shipment.
- SUMMER DOYENNE (Doyenne d' Ete). Small; yellow with bright red cheek; sweet; fine-grained; good.
- *LAWSON (Comet). Medium to large; yellow, covered with bright crimson; one of the most beautiful pears and a profitable early shipper.
- *GIFFORD. Medium size; yellow mottled with red; juicy, sweet; better quality than Lawson; ready for shipment same time.
- DEARBORN SEEDLING. Medium; light yellow; very smooth skin; sweet, very juicy, melting; an addition to the home orchard or for early market.
- *BARTLETT. Leads all other varieties for shipping, canning and drying; large; yellow, often blushed; fine-grained, juicy, buttery, perfumed, musky; most desirable main-crop pear; has but two faults—Bartlett blights badly and is not a good cold-storage sort.
- *LINCOLN. Medium size; clear bright yellow; high quality, nearly equal to Bartlett, which it follows in date of ripening; unusually good keeper. Blight-resistant and worthy of testing in all blight districts. In-

- troduced by Stark Bros. and said by them to be nearly immune to blight. 35c each, 5 to 7 feet.
- POUSSOCK. Large; yellowish russet; sweet, juicy, good; bears abundantly.
- HOWELL. Large; yellow sometimes shaded red; smooth and attractive; juicy, sweet; very productive; blossoms early and therefore makes an ideal pollinator for Forelle.
- **HARDY.** Large; yellowish russet; sweet, juicy, rich; a good shipper at moderate prices.
- *SECKEL. Small, brownish pear of highest quality. In good demand on many markets. No home orchard complete without Seckel.
- *ANJOU. Large; greenish yellow, often blushed dull red; melting, sweet, juicy; very good; tree grows slowly but eventually becomes very large, with spreading, open head; one of the best of all shipping pears, selling at high prices and keeping well in cold storage. Sold at \$6.75 per box this season. Good pollinator to plant with Bartlett. Resists blight.
- DANA'S HOVEY (Winter Seckel).

 Medium small, yellowish-russet pear
 of superb quality; markets well in
 half boxes.
- *BOSC. Large; long-necked, cinnamon-russet pear of best quality; should find a place in every home orchard and is a most profitable variety; fine-grained, rich, sweet, buttery, delicious. Brought \$5.00 this season.
- *COMICE. A large, late, shipping pear, famous alike for its high quality and the high prices which it always commands—frequently double that of Bartlett; greenish yellow, often faintly blushed; finegrained, sweet, juicy, delicious; unusually resistant to blight; good pollinator to interplant with Bartlett. This season sold at \$3.60 in half boxes. In demand for cold storage.
- URBANISTE. Medium to large; yellowish russet; very good; a pear for the home orchard.
- NELIS. One of the best known winter pears; medium; greenish russet; very high quality; desirable for home orchard and market. Tree a sprawling, uncouth grower and difficult to prune to shape.
- *FORELLE. A shipping pear of medium size and great beauty; greenish-yellow with shining red cheek speckled with brown spots like the side of a salmon trout; good qual-

ity and sells for fabulous prices to MORE PEARS FOR THE FAMILY the fancy trade. Has sold for \$8.95 OROHARD. in half boxes on the New York auction market this season. Tree unusually vigorous. Particularly suited to the foothills, where its unusual coloring is most highly developed.

- A. J. COOK. This new, late winter only obtainable through Loma Rica Hassler, horticultural commissioner chard: of El Dorado county. When samples of the fruit were first exhibited in Sacramento last winter, one of the leading newspapers dubbed it the "Million-Dollar Pear." The pear has not been sufficiently tested to determine its commercial desirability, and we prefer to offer it solely on its merits, leaving it to the judgment of California's orchardists to decide whether it shall find a permanent place after thorough testing in all sections.
- A. J. Cook is medium to very large, shaped like Bartlett but hardly so smooth; color light yellow with some russeting; flesh coarser than Bartlett but flavor practically iden-Burbank compares it to Kieffer in texture and Bartlett in quality. Ripe at Grass Valley about Christmas. Should prove valuable for late markets.

This is a most interesting variety and should be tested in all pear districts. To rapidly arrive at this result we are offering stock at very low prices for a new variety.

			Each	10
4 to	6	ft	80c	\$6.00
3 to	4	ft	60c	\$5.00
2 to	3	ft	40c	\$3.00

Stock limited to a few hundred trees. An addition to any home orchard.

GLOUT MORCEAU. A late shipping pear of fair quality, well known on the Eastern auctions.

BORDEAUX. Large; handsome shipping pear of good quality, grown in Oregon for the Eastern markets; very tough skin; better flavor than Clairgeau; very late.

A large, very late pear, introduced by Stark Bros. under the name of "Triumph"; grained, juicy, sweet, good. fine-

baked.

earliest to latest, Pears, from should be a feature of every family orchard, yet too often the fruit-grower's family is unacquainted with any variety except Bartlett, in spite of the fact that there is a succession of varieties of this delicious fruit pear, offered for the first time and ripening all through the season. The following list is arranged in order of Nursery, originated as a seedling ripening and suggests a most desir-of Bartlett in the orchard of J. E. able assortment for the Family Or-

> > Wilder Gifford

COMMERCIAL LIST.

The following varieties in the order of ripening are those in commercial demand for Eastern shipment. Those marked with a star (*) sell for higher average prices than Bartlett:

Lawson (Comet) Bartlett Howell Hardy Seckel *Anjou *Bosc Dana's Hovey (Winter Seckel) *Comice Winter Nelis *Forelle Bordeaux Glout Morceau Easter Beurre

It is quite possible that A. J. Cook may be added to this list after it has been more thoroughly tested. We are satisfied that it is better than Clairgeau—which we have dropped— *FASTER BEURRE. The latest good or Glout Morceau. Its Bartlett flavor market pear, always in demand; is so pronounced that it would rank large, good shipper, also desirable near the top if it were not for some in every home orchard; delicious coarseness of texture around the core. However, in spite of this fact, its

RICA NURSERY, GRASS VALLEY. CALIF. LOMA

superior flavor may give it a good *POND (Hungarian, Gros). market standing, and it should fully tested in all pear districts.

BLIGHT RESISTANT VARIETIES.

Arranged in the order of their resistance to blight, the following com-mercial sorts are much more resistant than Bartlett, Comice standing highest:

Comice Seckel Anjou Winter Nelis

PLUMS AND PRUNES.

With most varieties of plums pollination is of greatest importance. In planting them be sure that two varieties bloom at the same time, that cross-pollination may result.

The proper root is also a matter requiring careful consideration. For the Japanese varieties, peach root gives excellent results. Some plums of the European type—Grand Duke and Diamond for instance—are unsatisfactory on peach. Others—like Pond or Gros) (Hungarian and Agen (French Prune)-make a good union with either peach or plum stock. We propagate accordingly.

SERVICE DEPARTMENT.

Loma Rica Nursery will be glad to take up any horticultural problem Our prices are fair, but we charge with any orchardist at any time. We enough to put QUALITY into every stand ready to render any assistance sale, and we unqualifiedly guarantee that may be within our power. Our

terest in our customers does not cease as long as they are working toward a from the observant orchardists of the State, and will deeply appreciate hearing from them when any new or interesting condition comes under Blowers, Snyder, Mersereau, Wil- their notice. Let us all pull together son are four of the best—all large, for better methods of growing better high quality, and productive.

Their notice. Let us all pull together for better methods of growing better fruit—and better profits for the man

"PRUNINGS."

Of course, you want Quality trees, because none but the BEST are truly CHEAP.

The man who lets a few cents pricedifference and a slick tree agent influence him in buying nursery stock always regrets it-about five years too late.

Five dollars per acre saved in the price of trees when planting an orchard often means \$100 per acre LOST when the trees reach bearing age.

Thoroughbred stock, good tools, and QUALITY trees may cost a little more at the start, but think of the difference in VALUE RECEIVED.

Did you ever regret buying a good article?

 $_{\mathrm{cd}}$ YOU want trees Do YOU want trees that are CHEAP, or trees that are GOOD? If a few cents price-difference counts for more with you than QUALITY, it will be time wasted for you to read this price list.

We only expect to sell to those orchardists who know that no tree is TRULY cheap that is not also BEST.

All our stock is WORTH OUR PRICE—and then some—and we stand behind everything we sell "'til the cows come home.'

satisfaction to every customer. Those customers are urged to call upon us who have bought our stock in the freely and any information we pospast know how completely we satisfy sess will be gladly given. Our in- every just complaint.
